

## Boeing

---

Boeing is the world's leading aerospace company and the largest combined manufacturer of commercial jetliners and military aircraft.

Boeing Technology supports Boeing's business units and growth strategy by providing the right people, technologies, processes

and performance at the right time and in the right place across the company worldwide.

### Solution at a glance...

---

**Client: Boeing**

**Industry: Aircraft Manufacturing**

**Environment: Microsoft NT/Visual Fox Pro**

**Solution: Inventory Management**

**Devices: Intermec 2480 Wall Mount Terminals**

### Solution Summary...

---

Boeing needed a software solution that would allow them to scan inventory for tracking purposes on a real time basis in the most efficient, accurate, and cost effective method.

Due to Boeing's very large and complex inventory which involved the mass production of F15 and F18 fighter jets, the application needed to be developed quickly and efficiently, with the ability to download the information to a text file, then into their Visual Fox Pro database.

RFGen, with its easy to use ODBC Database mapping, as well as its easy VBA environment and powerful VBA extensions, enabled Boeing to implement the desired functionality with great effectiveness and speed. RFGen's robust applications and reliability have met all of the strict standards

demanding by Boeing in the manufacturing of these fighter jets.

Additionally, the RFGen Software Solution makes it easy to maintain and modify these applications.

The key considerations for selecting RFGen was that its technology is substantially easier-to-use, more intuitive, and demonstrably more reliable than anything else available, while DataMAX's track record for on time, on budget implementations helped to solidify the decision.
